[Electromagnetic Induction and Faraday's Law - ThoughtCo](#)

Electromagnetic induction (or sometimes just induction) is a process where a conductor placed in a changing magnetic field (or a conductor moving through a stationary magnetic field) causes the production of a voltage across the conductor.

[What is Electromagnetic Induction? - Definition from ...](#)

Electromagnetic induction is the production of voltage or electromotive force due to a change in the magnetic field.

Electromagnetic induction was discovered by Michael Faraday in the 1830s. Many electrical components and types of equipment work based on the principle of electromagnetic induction.
